Platform console

Creating a school space

Open a new space for a school, real or demonstration.

Steps

1. Open **Schools**, then **New school**.
2. Enter the name, the code (it becomes the school's address) and the mode: real or demonstration.
3. Create the management's first account.
4. Open the school's page and send it its access letter.

> **Good to know.** A real space is never deleted; only trial and demonstration spaces can be.

Handling help requests

Read schools' requests, answer and close.

Steps

1. Open **Journal**, then **Help requests**.
2. Open a request: the attached screen and version are shown.
3. Reply: the author gets a notification and an email.
4. Close it once settled.

> **Good to know.** You need the right to handle requests. Real and demonstration modes stay separate.

Following billing

See subscriptions, issue invoices and track what each school owes.

Steps

1. Open **Billing**.
2. Review subscriptions and pending invoices.
3. Issue a school's invoice; record its payment when it arrives.

> **Good to know.** Issued invoices cannot be edited; a mistake is fixed with a credit note.

Publishing an announcement to schools

Inform all schools of maintenance or news.

Steps

1. Open **Announcements**, then **New announcement**.
2. Write a short message and choose the schools concerned.
3. Publish: a banner shows in the schools' Management app.
