- Setting fees and instalments 7
- Closing the cash register 8
- Following unpaid fees 9

Teachers **10**
- Entering marks 10
- Printing a class's report cards 10

First steps

Signing in

Open your session with your number and password, and pass the two-step check.

Steps

1. Open your school's address (the school name is part of it).
2. Enter your phone number and password.
3. If your account uses two-step sign-in, enter the 6-digit code from your authenticator app.
4. On your first sign-in, choose a new password.

> **Good to know.** On a shared computer, sign out when you leave: your name menu, then **Sign out**.

Working without internet

Prepare the device so the cash desk and marks keep working when the network is down.

Steps

1. Sign in once with internet, on the device you will use.
2. Open **Prepare the device** in the menu and wait for the download to finish.
3. Work as usual. The sync indicator at the top shows what is waiting to be sent.
4. When internet comes back, sending happens by itself.

> **Good to know.** Payments and marks entered offline are never lost nor counted twice.

Writing to support

When stuck, write to the platform from the app and follow the answer.

Steps

1. Open **Help**, then **Write to support**.
2. Describe what you wanted to do and what happened.
3. Send: the screen and the app version are attached automatically.
4. Follow the answer in **My requests**; you are also notified.

> **Good to know.** You only see your own requests.

Management

Building the timetable

Set the time grid and availabilities, compute the timetable and publish it.

Steps

1. Open **Timetable** and set the time grid (days, hours, breaks).
2. Fill in teachers' availabilities and the rooms.
3. Click **Compute**: the app places the lessons and flags conflicts.
4. Adjust by hand if needed, then **Publish**.

> **Good to know.** Once published, each teacher sees their schedule and parents see the class's.

Creating accounts and roles

Give staff an account and set what each role can do.

Steps

1. Open **Staff** to add a person (or import the list from Excel).
2. Choose their role: accountant, cashier, secretary, teacher…
3. Hand them their access letter with the first password.
4. In **Roles**, adjust a role's permissions or create a role of your own.

> **Good to know.** Role changes are written to the audit log.

School settings

Name, logo, colour, currencies, school year, receipts: everything specific to your school.

Steps

1. Open **Settings**.
2. Fill in the name, logo, contact details and the header lines of documents.
3. Choose the currencies, the receipt format and the current school year.
4. In **School organisation**, create the levels, tracks and classes.

> **Good to know.** Nothing is hard-coded: what you enter here appears on receipts, report cards and letters.

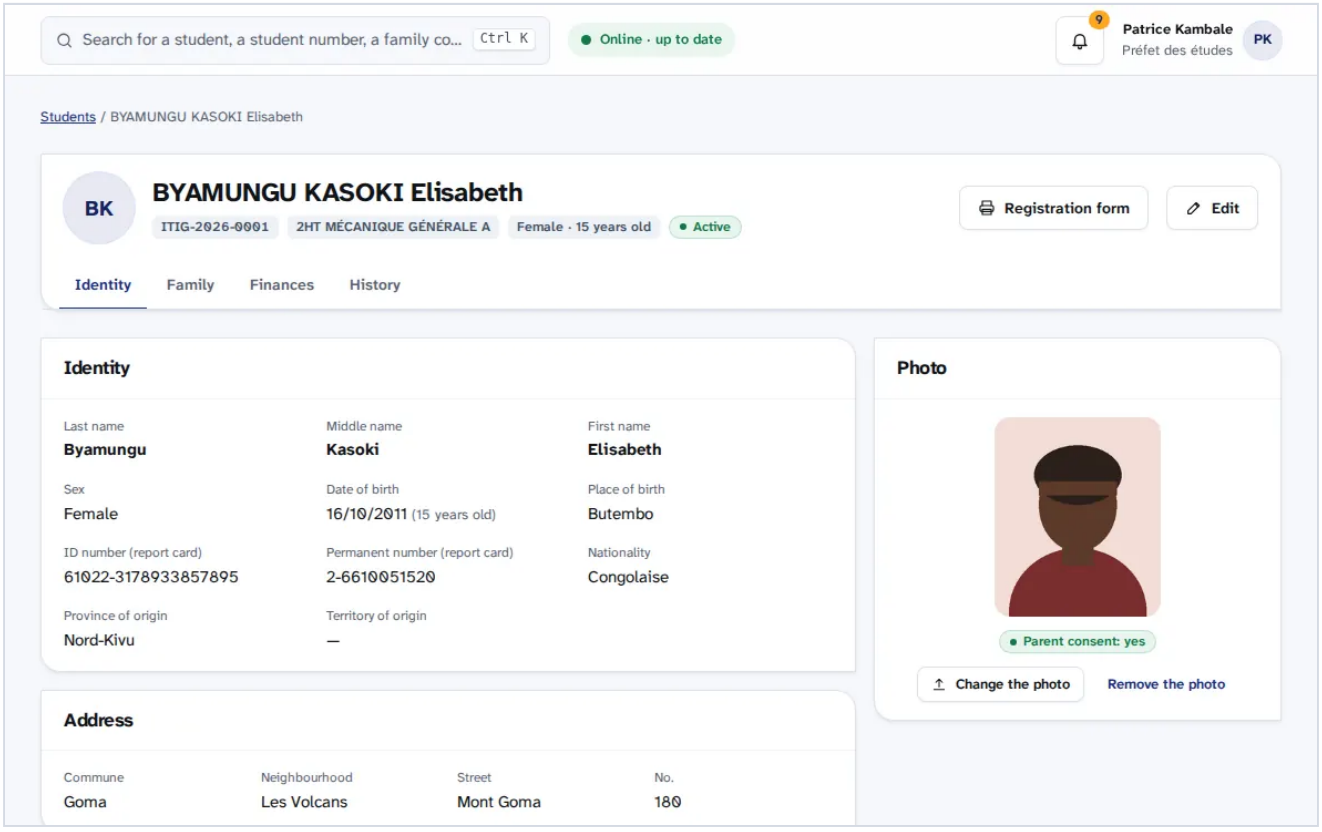

Secretariat

Enrolling a student

Create a new student's record with family, class and payment schedule.

Steps

1. Open **Students**, then **New student**.
2. Fill in the identity: surname, middle name, first name, sex, date of birth.
3. Choose the class (and the track if the school has them), or link the student to an existing family for siblings.
4. Save: the student number is given by the school and the fee schedule is prepared automatically.
5. Print the enrolment form if parents have to sign it.

A student's record: identity, family, finances and history.

> **Good to know.** To enrol many students at once, use the Excel import (page 6).

Importing students from Excel

Load a class or the whole school at once, and undo the import if needed.

Steps

1. Open **Students**, then **Import**.
2. Download the Excel template, fill it in, save it.
3. Upload the file: the app shows a preview and flags the rows to fix.
4. Fix them in Excel and upload again, or confirm the import.

> **Good to know.** An import can be undone: **Cancel this import** removes the students it created, as long as no payment is linked to them.

Printing lists and records

Print a class list, a student's record or a certificate with the school letterhead.

Steps

1. Open the relevant page: **Students** for a class list, the student's record for their form.
2. Click **Print** and choose the options (columns, paper size).
3. The preview opens with your school's logo and letterhead; start the browser's print.

> **Good to know.** The logo, name and header lines come from the **School settings**.

Cash desk and accounting

Take a payment

Receive money from a parent, record it and hand over the receipt, even when the internet is down.

Steps

1. Open **Cash desk** in the menu. If the cash desk is closed, open it first.
2. Find the student by name, middle name or student number.
3. Enter the amount received and choose the currency (dollars or francs).
4. Check the allocation: the amount pays the oldest instalments first.
5. Click **Collect** (F9 key). The receipt prints; hand it to the parent.

> **Good to know.** A payment is never changed or deleted. If there is a mistake, request its cancellation.

Cancelling a payment

Request the cancellation of a payment recorded by mistake, and have it approved.

Steps

1. Open the **receipt register** and find the payment.
2. Click **Request cancellation** and write the reason.
3. The authorised person (accountant or management) approves or refuses.
4. Once approved, a cancellation receipt is issued and the student's balance is restored.

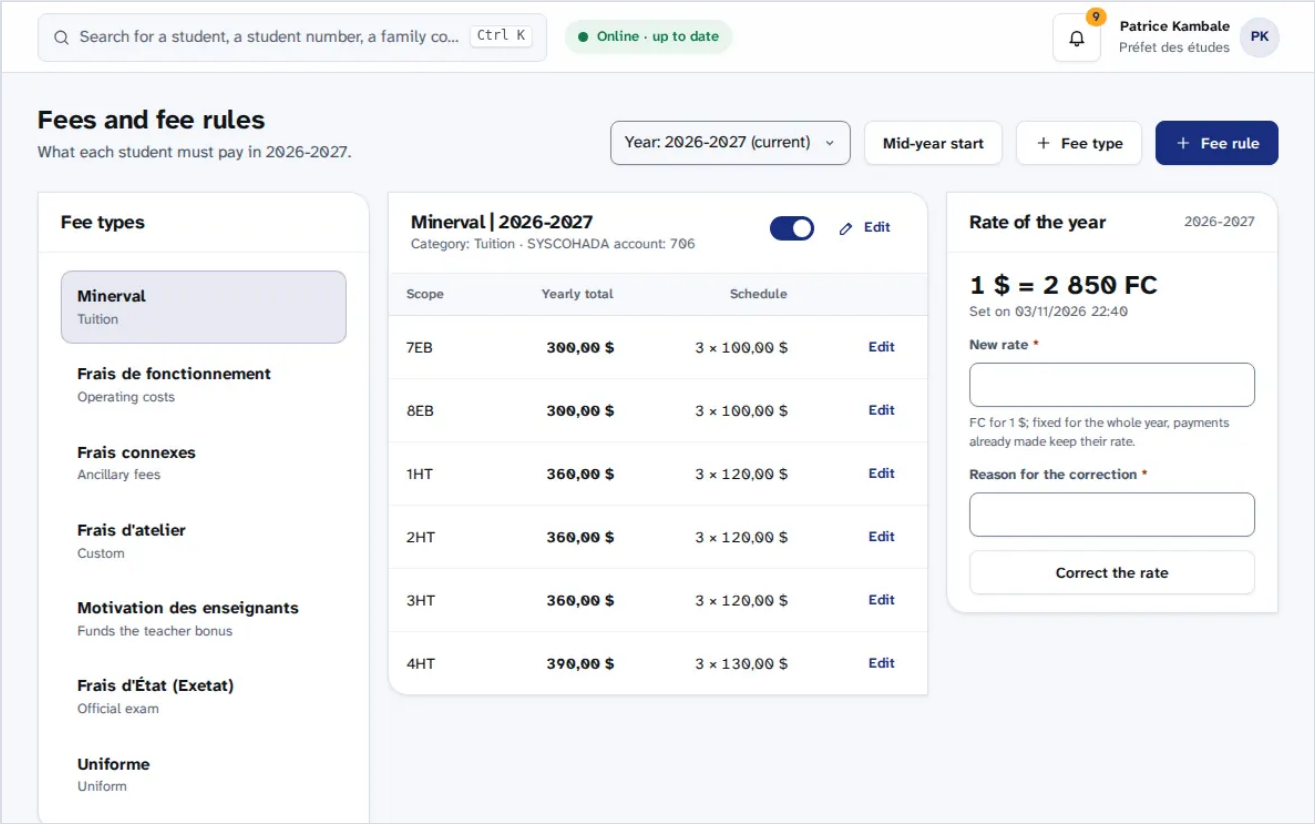

> **Good to know.** A payment is never erased: the cancellation is a new linked record, with the reason and the author.

Setting fees and instalments

Set each fee's amount, currency and instalments, and the year's exchange rate.

Steps

1. Open **Fees**.
2. Add a fee (tuition, registration…) and a scale: amount, currency, levels concerned.
3. Choose the schedule: one payment or instalments with their dates.
4. Record the year's exchange rate (dollars and francs).

Fee scales by level.

> **Good to know.** Amounts change for the future: what students already paid never moves.

Closing the cash register

Count the money at day's end, compare with the system and close the register.

Steps

1. Open **Cash desk**, then **Close the register**.
2. Count the money in dollars and francs and enter the amounts.
3. The app shows the difference with the recorded receipts.
4. If there is no difference, confirm; otherwise write the reason then confirm.
5. Print the closing report.

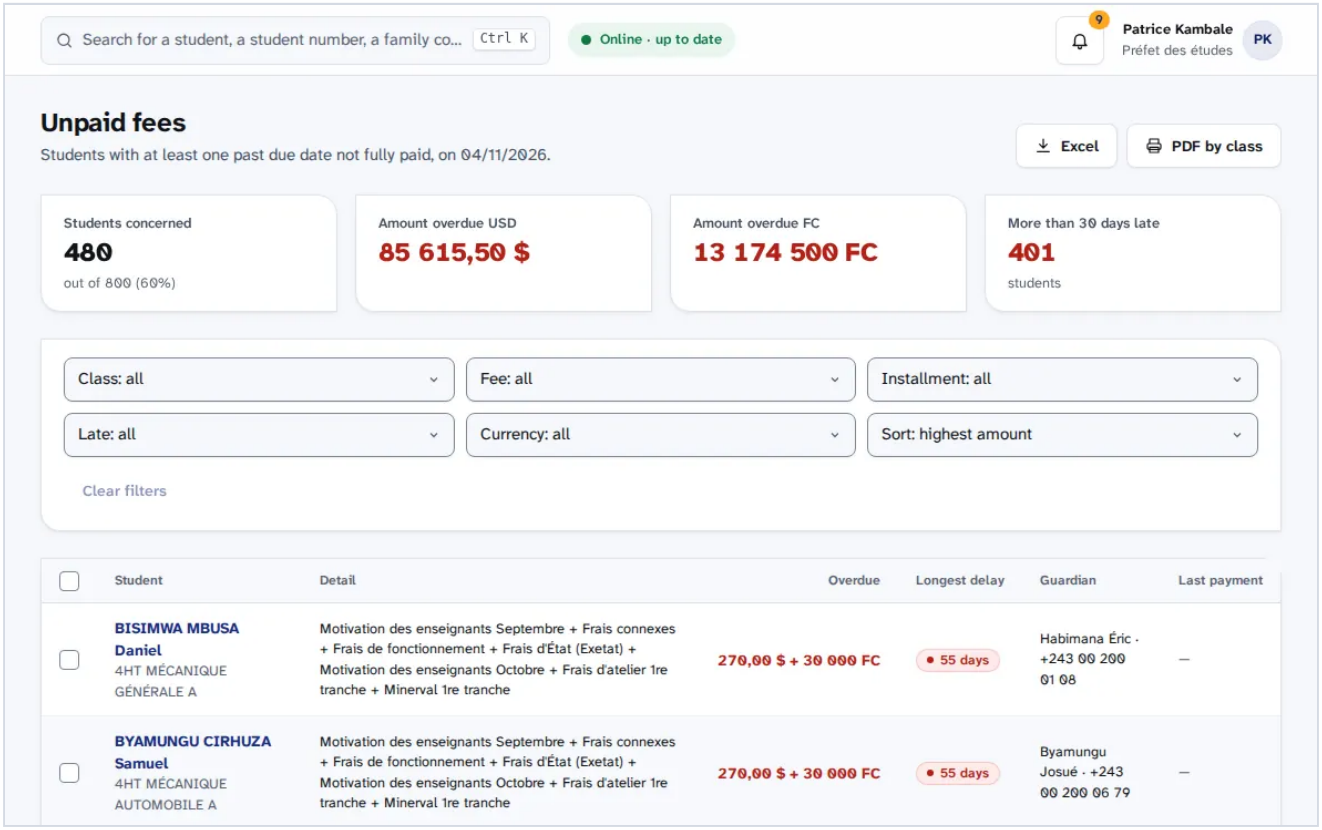

> **Good to know.** A confirmed closing cannot be changed. Past closings are under **Cash closings**.

Following unpaid fees

See who owes how much, remind families and export the list.

Steps

1. Open **Unpaid**.
2. Filter by class, instalment or amount due.
3. Open a student to see their instalments and payments.
4. Print the statements or export the list to Excel.

The list of unpaid fees by class.

> **Good to know.** Late students' parents can be summoned from **Summonses**.

Teachers

Entering marks

Fill in your course's mark sheet and send it for validation.

Steps

1. Open **Marks**, then choose your course and the term.
2. Enter each student's marks; the total is computed for you.
3. Save regularly: the draft is kept, even without internet.
4. When everything is in, click **Send for validation**.

> **Good to know.** A mark cannot exceed the course maximum. After validation, only the management can reopen the sheet.

Printing a class's report cards

Issue the report cards of a whole class once marks are validated.

Steps

1. Check that every sheet of the term is validated in **Marks validation**.
2. Open **Report cards**, choose the class and the term.
3. Check the preview of one report card (ranks, conduct, signatures).
4. Click **Print the class**: all report cards come out one after another.

> **Good to know.** A student behind on payments does not get the report card, unless the management grants a waiver. The report card follows the school's official format.
